Contents - Extract

- Common and civil law principles: an introduction and how they affect international construction contracts
- FIDIC contract: in-depth review of FIDIC forms and key drafting points
- Comparison of national standard construction contracts: ÖNORM B2110 (Austria), AFNOR (France), VOB (Germany), SIA (Singapore), SIA (Switzerland), JCT (United Kingdom), FIDIC and NEC (International)
- Practical aspects of project development: procurement, tendering and project planning, project financing and value engineering and managing quality
- Handling key issues in international construction contracts: variations and extensions of time, performance and completion, delay and disruption, defects and damages
- Claims management: pricing and claim practice
- Alternate disputes resolution and disputes adjudication boards: efficient and effective methods of resolving construction disputes
- International construction arbitration: practice and law

Extract from the list of lecturers

Dr. Wolfgang Breyer
Breyer Rechtsanwälte (Partner)

Mark Roe
Pinsent Masons (Partner)

Prof. Philip L. Bruner, Esq.
Arbitrator and Mediator
JAMS and JAMS International

Prof. Janet Walker
Osgoode Hall Law School
Arbitration Place (Canada)

Christopher Ennis
MSc, FRICS, FCIARB
Time | Quantum Expert
Foresnics Ltd. (Director)

Nicholas Gould
Fenwick Elliot LLP (Partner)

David Brown
Clyde & Co. (Partner)

Leo Grutters
Ing., MBA, DipArb, FCIARB, FDBF
Adjudicator, Arbitrator

Ronan Champion
BSc, LLB, MA, PLD, FCIOB, FRIICS
Champion Pearce LLP (Director)

Prof. Stefan Leupertz
Leupertz Baukonfliktmanagement
Former Judge at the German Federal Court of Justice

Short Facts

Degree Master of Business Engineering (MBE)
Duration 4 Semesters (2 years), part-time
Presence time 1 module per month (Thur-Sat)
Credits 120 ECTS
Language English
Fees Personal attendance: 16,700 €
Online & personal attendance: 23,500 €
Start Date Every spring, next start: May 2018
Application Via course website until: January 2018

“The ICPL MBE program offers an excellent hands-on advanced training for both legal practitioners and engineers.”

Dr. Fabian Behme, Lawyer
Graduate of 2017
International Construction: Practice and Law
Master of Business Engineering (MBE)

The Field of International Construction Law
The construction industry by far is one of the largest industries worldwide offering many different career opportunities. Day-to-day construction issues are changing and require greater legal understanding. It has become imperative for professionals such as lawyers, architects and engineers in the industry to obtain specialized legal education to deal with increasing legal issues.

Understanding the complex legal framework is indispensable when negotiating contracts with participants in a construction project. From the first briefing with the design team until the completion of the construction project numerous legal aspects have to be considered, some include design obligations of parties, completion, claims management and dispute resolution.

Legal matters become particularly complicated in construction projects when participants are involved in legal matters. Thus contractors, engineers and suppliers who were traditionally not involved in legal matters are now expected to deal with contracts drafting, negotiation and implementation.

Target Group
The program is designed for students from any country and is suitable for a range of professionals working in the construction industry such as construction engineering, architecture or surveying, including lawyers who are interested in specializing in construction law.

Degree
Graduates receive the Master of Business Engineering (MBE).

Lecturers
Lectures are held by internationally renowned academic and professional experts from Common and Civil Law jurisdictions who convey a comprehensive understanding of research and practice.

Duration
The master program takes two years and is split in four semesters, each six months.

Part Time
The course is tailored to enable the participation of students who may be working full time. Lectures are held once every month from Thursday to Saturday, so students can comfortably attend.

Structure
Out of the four semesters, the first three semesters comprise lectures and exams; the fourth semester is intended for writing the master thesis. The program is structured as follows:

<table>
<thead>
<tr>
<th>Semester 1</th>
<th>Semester 2</th>
<th>Semester 3</th>
<th>Semester 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Module 1 International Standard Forms</td>
<td>Module 6 Defects and Damages</td>
<td>Module 11 Alternative Dispute Resolution</td>
<td>Master Thesis</td>
</tr>
<tr>
<td>Module 2 Construction and Engineering Terminology</td>
<td>Module 7 Performance, Completion and Variations</td>
<td>Module 12 Delay and Disruption</td>
<td></td>
</tr>
<tr>
<td>Module 3 Legal Systems and Contract Law</td>
<td>Module 8 Private International Law</td>
<td>Module 13 International Arbitration</td>
<td></td>
</tr>
<tr>
<td>Module 4 Liability in Construction Contracts</td>
<td>Module 9 Project Development</td>
<td>Module 14 Pricing and Claim Practice</td>
<td></td>
</tr>
<tr>
<td>Module 5 Procurement and Tendering in Construction</td>
<td>Module 10 Standard Forms of Contract - FIDIC</td>
<td>Module 15 Construction Contract Types, Review and Drafting / Techniques of Project Planning</td>
<td></td>
</tr>
<tr>
<td>Exams</td>
<td>Exams</td>
<td>Exams</td>
<td>Presentation</td>
</tr>
</tbody>
</table>

Thus contractors, engineers and suppliers who were traditionally not involved in legal matters are now expected to deal with contracts drafting, negotiation and implementation.

Legal matters become particularly complicated in construction projects when participants are from different countries as the contractual relationships may be subject to different legal systems.

These are but a few examples of the complexities which professionals will most likely have to manage, hence the need for a specialized program on international construction law bringing practice and theory together in the international construction industry.

Location
To create an optimal studying atmosphere the lectures take place in comfortable conference centers in Stuttgart, Germany.

Distance Learning
For those students having signed in for online attendance, we offer to participate at class via our virtual class room. It enables full integration in the lectures in real time. Personal attendance is only required for the exams taking place once per semester.

Fees
The total fees of the master program are:
- Exclusively personal attendance at lectures: 16,700 €
- Online and personal attendance at lectures: 23,500 €

Included is food and beverage during the lectures, lecture materials and access to University facilities (physical & virtual library). Not included are personal costs for travel, housing and subsistence expenses.

Admission Criteria
The following criteria are required to be fulfilled by applicants:
- A bachelor degree in a relevant subject (e.g., engineering, construction management, surveying, law), or equal
- Two years working experience in a relevant field
- Sufficient English skills

For detailed information regarding the admission criteria please check our website.

Application
Applications can be handed in from 31st October 2017 until latest 31st January 2018 via our website.
