## The Field of International Construction Law

The construction industry by far is one of the largest industries worldwide offering many different career opportunities. Day-to-day construction issues are changing and require greater legal understanding. It has become imperative for professionals such as lawyers, architects and engineers in the industry to obtain specialized legal education to deal with increasing legal issues.

Understanding the complex legal framework is indispensable when negotiating contracts with participants in a construction project. From the first briefing with the design team until the completion of the construction project numerous legal aspects have to be considered, some include design obligations of parties, completion, claims management and dispute resolution.

### Target Group

The program is designed for students from any country and is suitable for a range of professionals working in the construction industry such as construction engineering, architecture or surveying, including lawyers who are interested in specializing in construction law.

“Great and unique study program, international background from all over the world and top-notch lecturers.”

*Dogu Deniz Demir, Engineer*

### Duration

The master program takes two years and is split in four semesters, each six months.

### Part Time

The course is tailored to enable the participation of students who may be working full time. Lectures are held once every month from Thursday to Saturday, so students can comfortably attend.

### Lecturers

Lectures are held by internationally renowned academic and professional experts from Common and Civil Law jurisdictions who convey a comprehensive understanding of research and practice.

### Structure

Out of the four semesters, the first three semesters comprise lectures and exams; the fourth semester is intended for writing the master thesis. The program is structured as follows:

Semester 1	Semester 2	Semester 3	Semester 4
<b>Module 1</b> International Standard Forms	<b>Module 6</b> Defects and Damages	<b>Module 11</b> Alternative Dispute Resolution	<b>Master Thesis</b>
<b>Module 2</b> Construction and Engineering Terminology	<b>Module 7</b> Performance, Completion and Variations	<b>Module 12</b> Delay and Disruption	
<b>Module 3</b> Legal Systems and Contract Law	<b>Module 8</b> Private International Law	<b>Module 13</b> International Arbitration	
<b>Module 4</b> Liability in Construction Contracts	<b>Module 9</b> Project Development	<b>Module 14</b> Pricing and Claim Practice	
<b>Module 5</b> Procurement and Tendering in Construction	<b>Module 10</b> Standard Forms of Contract - FIDIC	<b>Module 15</b> Construction Contract Types, Techniques of Project Planning	
<b>Exams</b>	<b>Exams</b>	<b>Exams</b>	<b>Presentation</b>

### Location

To create an optimal studying atmosphere the lectures take place in comfortable **conference centers in Stuttgart, Germany.**

### Distance Learning

For those students having signed in for online attendance, we offer to participate at class via our virtual class room. It enables full integration in the lectures in real time. **Personal attendance is only required for the exams taking place once per semester.**

### Fees

The **total fees** are:

- Exclusively personal attendance at lectures: 16.830 €
- Online and personal attendance at lectures: 23.580 €

Included is food and beverage during the lectures, lecture materials and access to University facilities (physical & virtual library). Not included are personal costs for travel, housing and subsistence expenses.

### Admission Criteria

- Bachelor degree in a relevant subject (e. g. engineering, construction management, surveying, law), or equal
- Two years working experience in a relevant field
- Sufficient English skills

### Application
